

This print brochure supported a key initiative at Qualis to expand engineering staff. The content is designed to generate excitement among candidates, identify points of contact, and to offer the web-page URL that gives more information. Qualis (www.qualis.com) is a verification IP, consulting, and training firm.

Share in our explosive growth

While we are excited about where we are today, we are convinced our future is explosive. The buzz about the Qualis® successes in North America and Europe is spreading. If you love being at the screaming edge of technology, if you are excited by tough challenges and if you want to share this excitement with the hottest engineers around, then you'll love it at Qualis.

Who is Qualis

Qualis is a systems design and verification consulting firm. We're focused on making communications companies more competitive by helping them stay ahead in fiercely competitive emerging markets. Qualis shortens client design cycles by delivering design and verification services, providing training in optimal methods, delivering licensable verification components and by building best practices methodology into client organizations.

As a leader in the development and implementation of design and verification methodology, Qualis offers a unique opportunity to contribute to the definition, refinement and testing of new methods and design flows. You'll be a key contributor in assuring those methodologies make client organizations successful.

To compete in today's markets, networking companies must quickly grasp and harness new technology and protocols while ensuring a seamless fit with existing infrastructure. They must be able to quickly adapt to changing standards specifications and technology breakthroughs. In short, they need resources with protocol-specific knowledge and a methodology for moving products to market faster than ever. That is exactly what Qualis is focused on delivering and we're looking for skilled individuals who want to jump in on the excitement! This is an excellent way to become involved in some of the newest, fastest moving technologies in the industry.

Career Opportunities

In North America Qualis has both principal and senior engineering positions open in Networking Technology Design/Verification. These positions require experience in either SOC RTL design, verification or methodology development. Networking experience is a plus.

In Europe Qualis has both principal and senior engineering positions open in Communications Technology Verification. These positions require experience in hardware/software design and verification, functional verification and communications or consumer electronics development.

In any of these roles you will make technical contributions to the delivery of new products for networking and communications clients. For more details, visit our Careers pages on our website at www.qualis.com.
